

AMENDMENTS TO THE SPECIFICATION

On page 35 of the Specification, please replace the Abstract of the Disclosure with the following new Abstract:

ABSTRACT OF THE DISCLOSURE

--A controller held in two hands for controlling electronics, the controller including a housing with a left-hand portion and a right-hand portion, a plurality of depressible surfaces or buttons exposed on the housing and in operational association with electricity manipulating devices. In one embodiment at least one of the electricity manipulating devices is a pressure-sensitive analog sensor providing a varying analog electrical output in response to physical pressure applied to a finger depressible independent or individual button. In another embodiment the above is in combination with an On/Off only sensor. In yet another embodiment one of the depressible surfaces associated with a pressure-sensitive analog sensor (electricity manipulating device) is positioned in the right-hand area of the housing for operation by a right hand digit while grasping the right hand portion of the housing with the right hand. Yet other embodiments are described herein.--
